

Packlib is a software module integrated into the PLMpack platform, allowing the management and the use of 2D, 3D and parametric libraries of packaging and POS/Display.

Designed for the optimization of packaging system, the Packlib module includes many services:

- Graphic navigation
- Standards Libraries
- Intra-company exchange platform
- Animated 3D visualizations
- Parametric resizing
- Downloading models (Packaging, POS, PAV, etc...)
- Taxation / nesting
- Help with cost estimation
- Optimization of palletization

Un outil intégré pour optimiser les processus de conception packaging & faciliter les flux numériques
Integrated tool to optimise your design process and simplify your digital flow

Every year, many innovations and new regulations appear that transform our professions. Thus, the world of packaging must evolve while preserving the know-how and requirements of all generations.

You now have a tool that will reveal your own know-how.

Here are some examples of how Packlib can be used:

Redesign platform for a packaging issue; Eco-design support; Platform for digital production; Tools for highlighting a company's know-how; Commercial showcase; Solution catalog; Customer/Supplier communication
